

Business Technology Governance Training

How comfortable is your board making technology decisions?

This round of technology innovation might make you rethink your business model in fundamental ways. Very likely significant investment is needed to achieve the desired change. Rapidly changing customer expectations of a digital customer journey are another reason for heavy investment.

This means that innovation and technology must move up a few notches on a board's agenda. Very often, the understanding of technology doesn't keep pace with the change we are experiencing.

“ Excellent presentation and interactive session. Expanded my horizon about IT Governance and justification for IT investment. ”

- delegate from Nigeria.

Lost in jungle of acronyms?

Many top management members fear losing face when asked questions about technology because they are not familiar with the jargon. To take corporate governance beyond formal compliance, board members need the knowledge to cut through complex investment and funding proposals for technology quickly.

Corporate Governance meets Technology!

This training offers a unique blend of Business Technology and governance to directors (executive and non-executive). We speak business and understand technology. We will work with fictitious case studies from your industry and region.

Do you need a geek on your board?

Maybe. But certainly, all your board members would benefit greatly from our 3-day learning experience. Our facilitators are technology governance experts. They understand the challenges of being a director because they serve on boards.

A framework for the Governance of Business Technology will be introduced. Our facilitators will present their key insights on challenges for Business Technology governance. Step-by-step planning of better technology governance will start right here - in the class room. Groups of delegates will work on fictitious case studies. The training is customized to address local regulations and markets.

After attending this training, delegates will:

- Appreciate their evolving roles with regards to governance of technology.
- Better understand the need for a holistic technology and cyber risk framework.
- Navigate the vocabulary used to describe different standards, such as ISO norms, ITIL, COBIT, SCRUM, CMMI.
- Establish an adequate technology governance framework that allows to manage risk appetite and set risk tolerance levels.
