

Business Technology Workshops

How meshed are Business and Technology in your organization?

Are you seeing thumbs up from the technology team while observing frowns on the faces of the business representatives? The value of technology accomplishments lies in the eyes of the beholder. About 50% of all technology driven projects require massive reworking by the time they are finished. This takes time, too much time!

Business and Technology should be at eye level, but what we often experience is finger pointing and a host of misunderstandings.

“ This methodology is building trust in incremental steps. All the way from the initial diagnosis to replicating effects across your organisation. ”

Hiding in a jungle of acronyms?

We often find the technology teams isolated. Either revered for their expertise and kept at a distance. Or shielded by tough project deadlines and a language loaded with technology acronyms. To accelerate change, Business and Technology need to work together and learn to trust one another.

Speak Business and understand Technology!

We are providing a methodology that allows your technology team and business representatives to address this challenge in a joint effort. Our participatory facilitation techniques will jump-start collaboration and problem solving.

Are you playing hare and hedgehog?

The way technology is outrunning our capabilities to change can leave one exhausted. Bring your organisation up to speed with our workshop series. We will start off with diagnosing the collaboration between Technology and Business.

Based on the diagnosis, we will agree on priorities. Joint action planning will be done in interactive workshops. We will follow through with regular impact evaluations. Trust will build as we continue to improve collaboration incrementally. Good practices will be translated into a blueprint, ready to be scaled or replicated throughout your organisation.

Our workshops will get you:

- Stronger focus on what matters most due to better alignment between Business and Technology.
- Resilient decision making processes providing a solid foundation for faster execution.
- Frequent alignment with your business objectives ensuring that technology is truly enabling your corporate strategy.
- Improved communication and learning, helping to engage and retain your most talented people.

Foster collaboration for agility. Give us a call!
